LOKHAN'S VILLAGE DONG

Lokhan lives in a village Dong across River Lohit in Arunachal Pradesh. It is a hilly area with a very small population. The village receives heavy rainfall. Lokhan's house is made up of mud, bamboo, straw and dry leaves.

LOKHAN'S HOUSE

LOKHAN'S HOUSE IS MADE UP OF MUD, STRAW, BAMBOO, WOOD AND DRY LEAVES

One day Lokhan's father, Ali, took him to a construction site where he worked as a helper. On the way, they crossed a bamboo bridge. Ali told Lokhan that there was no bridge when he was young. He had to swim across the river to go to the other side.

LOKHAN AND HIS FATHER HAD TO CROSS A BAMBOO BRIDGE

Lokhan was fascinated when he saw the huge construction site. He asked his father about the building that was under construction. Different types of materials were lying around and the people were doing different jobs. His father told him that they were building blocks of flats. He also showed Lokhan different building materials like cement, wood, marbles, glass, tiles, iron rods and bricks. Lokhan wanted to know how bricks were made. Ali explained the steps involved in brick making.
